

Extreme Earth

A volcano is a massive mountain that can cause deadly destruction to homes and villages. When the volcano begins to rumble it starts booming molten magma and lava. After this lethal lava mountain erupts it burns up everything and everyone in its path. This lava isn't just hot, it's boiling! It's the most destructive mountain on planet Earth. As the triangular mountain strikes with anger, the flames shoot out of its head, and as it erupts, puffs of smoke spew out into the dusty air.

Extreme Earth

Its attracting, its electrifying, its blue and its bold!

This is an astonishing beast, with fangs like bolts and claws like forks. Rocks struggle to stay still. The same with the emerald trees. Earth has beauty to behold behind the scenes of light!

Boulders rumble and tumble, trees fall and roll, farms are defeated at the hands of bolts of electricity. Bangs boom from high skies. Trembling human life forms begging for mercy. Strikes come and then fear takes over. Free human beings in caves tremble knowing supernatural causes are true. But the real words are.

We can only hope. As it storms through the skies, it bolts and booms like bombs.

Extreme Earth

A volcano is a very frightening and explosive feature of the Earth. When the boiling hot red liquid is in the Earth it is magma, but once it erupts it is lava. With a volcano you only have a few seconds before it erupts. But lava is not just incredibly hot, it is boiling!

As the scorched ground shakes with fear, the humans nearby are sprayed with deadly lava. As the fiery flames spurt from the volcano, the remaining lava dribbles down the cylindrical mountain. As the flames disappear, the smoke appears as if from nowhere.

Evie (Y4)

Extreme Earth

This vicious killing force of nature destroys people's homes as soon as it hits. Parts of the house are missing leaving only the foundations on the ground. This threatening force of nature scares people to get to shelter. From the Mexico Gulf you get them all around the world.

When grey, gloomy, swirling clouds come from the sky, it puts you into shock and you are in trouble. At speeds of over 100 miles per hour, you don't even want to see it. This wind leaves a scarred planet Earth. It cackles with glee as it turns possessions into rubbish, throwing it away like it's nothing.
