

Louis Pasteur

Louis Pasteur is the most important person because he taught schools about chemistry. He was born in December in the year 1822. He had five children but sadly three died at an early age. He invented many vaccinations.

If Louis Pasteur hadn't taught about chemistry we might have more diseases and get very ill with diseases like Chicken Pox and Measles, so that's why we now have vaccinations.

What would happen if we didn't have chemistry?

How would we feel if we didn't have vaccinations?

What would happen if we didn't have vaccinations?

Louis Pasteur is the most important person we are learning about because of this evidence.

Jesse Owens

I have chosen Jesse Owens for the best person in history because he won four gold medals in the Olympics. This was particularly special as some foolish people did not think that as a black man he should have done so well. You have to agree with me that he was amazing.

Jesse Owens came from a big family. He had seven sisters and two brothers. He was the youngest of his family. He met his wife when he was fifteen. He had three children called Gloria, Marlene and Beverly.

He was an American athlete. It was very hard to run as fast as him. Jesse Owens had to train for the medals, he is amazing! Most people would agree with me. You must think that's amazing don't you?

Jesse Owens was quite tall and was a gentleman who liked sport. Once when a teacher asked him his name he responded with JC. After Jesse Owens had finished his career he drove a bus.

You must be amazed by now?
