Subject: Zigon Discoveries

Dear Dr Jones,

I am pleased to email you to report about our most recent discoveries on the new planet, Zigon. We have confirmed, that the planet may have life and chemicals, ^{sp.} ~~but~~ which could ^{sp.} ~~potentially~~ could help on Earth. ^{sp.} Whilst on Zigon, I'm pleased to announce that our team leader ^{sp.} have retrieved information and observed underground caves, rocks and fossils.

While being on Zigon, we have identified that dreadful weather has occurred on the planet. This ^{weather} may continue on the surface of Zigon, containing ^S ~~destructive~~ destroying life forms. I can announce that we are beginning to make out the planet by ^S ~~isolating~~ the weather on the planet. There is a 15% chance that there is life on Zigon. We plan to investigate

what this may mean.

One of our space cadet colleges, has recognised that on the north axis on the planet are underground crystal, diamond caves. Space cadet John has confirmed we must take these investigations a bit further by going ^{absailing} ~~absailing~~ down into the magmatized caves. Dr Jones, we must confirmed confirm what this planet's abilities are.

By taking further investigations on the planet's magmatized crystal caves, we can identify what the planet occurs to look like. We are taking part on an investigation to find what source powers this planet and where it is located. We will report back to NASA when we have retrieved information. Our space colleagues have recovered multiple samples of prehistoric planets. The plants, which have bacteria in, may help humans on Earth.

Space cadet Newman.
